1. Main facts and figures

- according to the 2021 Census, London was the most ethnically diverse region in England and Wales
- out of all regions, London had the smallest percentage of people who identified as white British, and the North East and Wales had the largest percentage
- more white people lived in the South East than anywhere else, and more people from the black, Asian, mixed and ‘other’ ethnic groups lived in London than anywhere else
- Newham in London was the most ethnically diverse of all local authorities in England and Wales

2. Things you need to know

What the data measures

The data measures the ethnic diversity of England and Wales by region and local authority.

Census data includes people in around 25 million private households. It also includes communal establishments, such as care homes and university halls of residence.

Percentages are rounded to 1 decimal place.

Read more about the [2021 Census](#).

Not included in the data

The data does not include households that did not answer the question about ethnicity.

97% of people completed the Census.

The data has been adjusted to take into account people and households who were not counted or counted incorrectly.

The ethnic groups used in the data

This data uses the [standardised list of 19 ethnic groups](#) that were developed for the 2021 Census.

The ethnic groups used in the 2021 Census were slightly different from the [2011 Census ethnic groups](#).

There were 2 changes in 2021 – the ‘Roma’ group was added under the ‘white’ ethnic group, and people could write their own response under the ‘black African’ ethnic group.

Methodology

Read the [detailed methodology document](#) for this data.

You can find confidence intervals for the data in the [interactive tools showing the quality and quality assurance](#).

In the data file

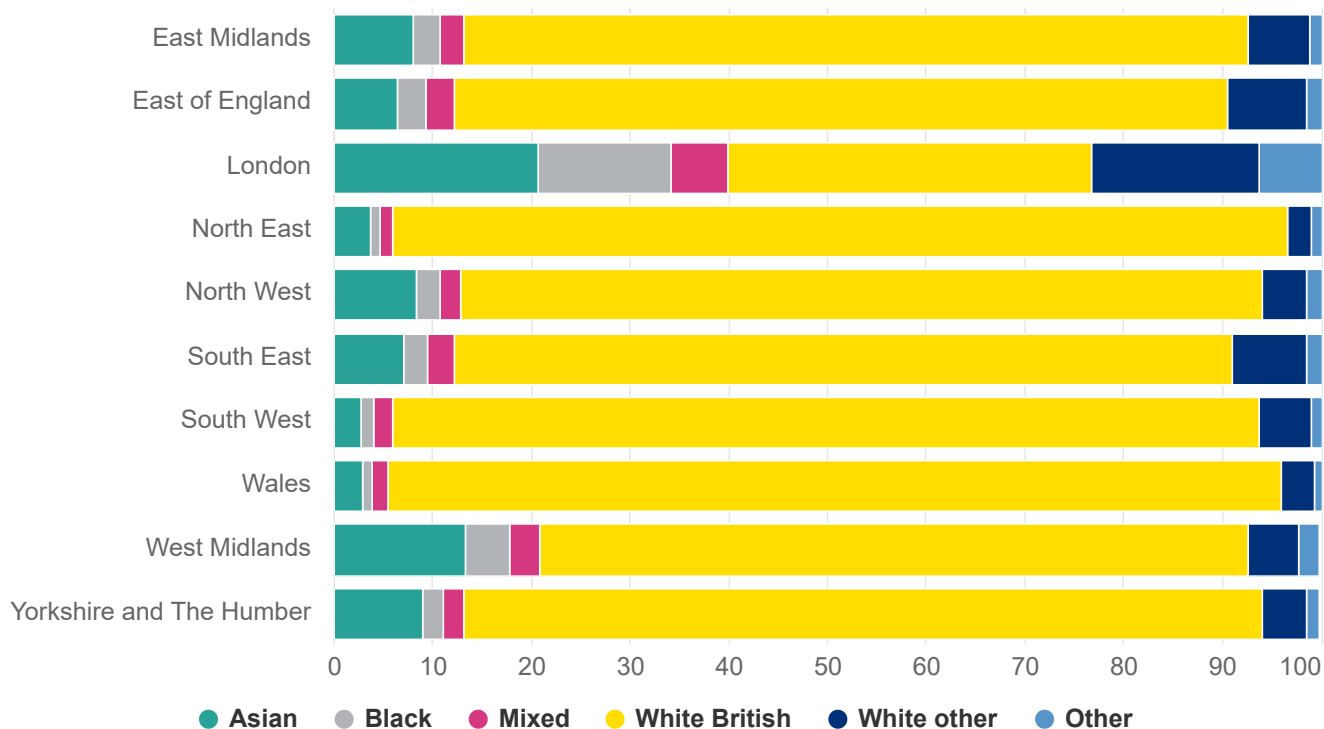

See [download the data](#) for additional local authority data, including:

- the ethnic breakdowns in each local authority
- the percentage of each ethnic group that lives there

[Download table data \(CSV\)](#) [Source data \(CSV\)](#)

Summary

‘Ethnic diversity’ here refers to the percentage of the population that is not from the white ethnic group in each local authority.

The data shows that:

- out of all local authorities, Newham in London was the most ethnically diverse, with people from the Asian, black, mixed and ‘other’ ethnic groups making up 69.2% of the population
- 8 out of the 10 most ethnically diverse local authorities were in

London

- outside London, Slough was the most ethnically diverse local authority, with people from the Asian, black, mixed and 'other' ethnic groups making up 64.0% of the population
- of the 10 local authorities where white people made up the highest percentage of the population, 3 were in the North West, 2 were in Yorkshire and the Humber, and 2 were in the South West
- Allerdale in the North West was the least ethnically diverse out of all local authorities, with white people making up 98.5% of the population – they made up 98.2% of the population in both Torridge and Ryedale

Purpose of data source

The Census takes place every 10 years. Census data gives the government the information it needs to plan and run public services. It is also used as a benchmark for other statistical estimates, and can help illustrate differences between various groups in the population.
